Engineering Workbench: Expert Index Collection

Gain seamless access to trusted third-party sources and other rich technical information, including technical articles, publications, reports, design principles/best practices and more. Expert Index helps engineers and other technical professionals quickly identify proven solutions to their technical challenges, so they can deliver projects on time and on budget.
Accelerate and inform technical problem-solving with precise answers from trusted sources.

Engineers, scientists and researchers typically rely on a wide variety of information sources to inform their decision-making process. But they often struggle to quickly locate relevant solutions. In fact, industry research shows that, on average, engineers need to consult 13 different sources to solve a single technical problem.

No wonder that knowledge workers must devote 40% or more of their time just seeking, sorting and vetting information – adding up to hundreds of lost hours of productivity each year per engineer. That lost time contributes to project delays, higher costs, and increased risks as engineering teams struggle to solve problems and deliver results on time and on budget.
A Window into a Universe of Technical Knowledge

Expert Index Collection by Accuris, delivered on Engineering Workbench™, is the most comprehensive collection of trusted, authoritative engineering and technical reference content, aggregated and readily accessible in one place, to help engineers, scientists and other knowledge workers quickly make the best decisions.

With the Expert Index Collection, engineers, researchers and scientists are able to discover answers across an extensive, vetted collection of more than 76.5 million technical articles, publications, reports, design principles/best practices and more, including over 100 eBook titles.

Expert Index Collection is delivered on Engineering Workbench, a unified technical knowledge platform that accelerates technical research and problem-solving through single-point access to critical information resources, combined with next-generation search analytics and specialized tools tailored to the needs of technical professionals.

Accelerate Knowledge Discovery

When searching the Expert Index, the next-generation search technology in Engineering Workbench accelerates research by dynamically summarizing relevant documents based on a semantic analysis of their contents, extracting key themes into a convenient executive summary.

Advanced search functionality allows users to specify knowledge bases to be searched, so information from particular publishers of interest can be singled out for review. Faceted filtering also enables a user to instantly drill down to the most pertinent content.

Citations include links to original documents, allowing you to single-click directly to the relevant passage in Accuris-hosted content. The appropriate passage will be highlighted so your eyes are instantly drawn to the pertinent information.

This approach allows for a rapid review of a body of the most applicable knowledge in minutes instead of days, shortening the research process and allowing knowledge workers to make better decisions faster.
Solve problems faster and with confidence.
